

Creating a platform in robotic cardiology

Updated: 7 days ago

More than just a meeting of like-minded peers, discussions, challenges and different point of view generating new ideas and solutions.

Welcome to our meeting gallery. our photographer Emile Peters created a very nice online photo album of SCRN EU Inaugural Meeting 2016 in Amsterdam. The purpose of the meeting was to introduce the world to SCRN, Society for Cardiac Robotic Navigation, a powerful alliance of robotic users that aim to further spread knowledge, drive innovations and advance technologic development.

"To create a platform for users of robotic technology in cardiology and the wider medical field, we founded Society for Cardiac Robotic Navigation, SCRN" - Dr. Tamas Szili Torok, President SCRN 2016-2017

The first Inaugural Meeting of SCRN took place at the Doubletree by Hilton Hotel in Amsterdam on 20-21 October 2016. The audience of a little under 50 participants had a first glimpse of what SCRN stands for and was given the opportunity to listen and contribute to discussions from speakers own-site as well as video presentations from the United Kingdom. Three live cases from Rotterdam, Antwerp and Bad Oeynhausen were part of the program. Key note speaker Prof. Hein Wellens gave insight on 50 years of clinical electrophysiology and a look into the future.

Feel free to browse our gallery and should you wish to use one of the photo's please don't forget to credit our photographer Emile Peters, NL.
