

# Forging a global alliance

**More than just a meeting of like minded peers, discussions, challenges and different point of view generating new ideas and solutions.**

SCRN's second meeting in Lisbon was a success, not only because of growing number of participants and members, but also due to the combination of efforts of the SCRN EU and the SCRN Americas. The purpose of the meeting was to create one global SCRN, Society for Cardiac Robotic Navigation, that continues to connect powerful alliances between various robotic users.

*"Forging an alliance between the ~SCRN EU and SCRN Americas will broaden the scope of our societies and create synergy in our combined efforts" Dr. Peter Weiss SCRN (A)*

The second meeting of SCRN was hosted by Prof. Pedro Adragão, at Hospital Da Luz on 19-20 October 2017. The audience watches live cases from Lisbon as well as boxed cases. The comfortable auditorium of Da Luz Hospital was the perfect setting for engaged discussions, in-depth presentations and new ideas around the use of robotic technologies in medicine.
